LADLE CARRIERS

Swift Flexible Path Transport of Molten Metal

- ★ SELF LOADING AND UNLOADING
- ★ SUPERB OPERATOR VISIBILITY
- ★ PRECISE LADLE POSITIONING
- ★ EXCELLENT MANEUVERABILITY
- ★ RELIABLE CAT POWER MODULE

KRESS LADLE CARRIERS

LADLE CARRIERS...

Kress ladle carriers are designed expressly for ladle transport, featuring heavy duty earthmover tires and free swinging ladle hooks. A ladle side shift control permits exact positioning of the ladle onto fixed stands or onto the ground. These units are available up to 450 tons (408t) capacity.

LADLE/SLAG POT CARRIERS...

The ladle/slag pot carriers utilize high capacity aircraft or earthmover-type rear tires. Ladles are handled by the trunions or bail arms and lifted by means of hydraulic struts. Ladles, as well as slag pots, can be picked up, transported, and dumped with these carriers. These units are available up to 250 tons (227 t) capacity.

ELEVATING PALLET CARRIERS...

Kress elevating pallet carriers provide a very narrow, high capacity, ladle transport system. These units feature heavy duty earthmover tires and a simple hydraulic system. This type is available up to 500 tons (454 t) capacity
